

## AKORD GHERKIN

Predominately female flowering hybrid. Produces spined, pale green fruits with a length/diameter ratio of 3:1. Akord has a vigorous crop with a strong root system. This makes it favourable to grow under less ideal circumstances. Dark green crop that grows easily. Resistant to Cladosporium and tolerant to Cucumber Mosaic virus, powdery mildew and downy mildew.

Type Crop INT : Predom. female flowering

Varieties perform differently under different climatic conditions, and are usually only suitable for specific markets. For more elaborate information about this variety in a specific market, visit the assortments on our country websites, via [www.bejo.com/countries](http://www.bejo.com/countries). Our local crop specialists are happy to give additional tailor-made advise.
