

ATOMIC GHERKIN

Predominantly female flowering hybrid. This early and vigorous variety produces spined fruits with a pale colour. The fruits have a very small seed cavity. Recommended for industry and fresh market, mainly for Poland. Suitable for long term storage after salting. L/D ratio: 3,1-1. Good ratio for small and also bigger fruits.

Type Crop INT :

Predom. female flowering

Varieties perform differently under different climatic conditions, and are usually only suitable for specific markets. For more elaborate information about this variety in a specific market, visit the assortments on our country websites, via www.bejo.com/countries. Our local crop specialists are happy to give additional tailor-made advise.
