

TAVIRA
CUCUMBER

Parthenocarpic Slicer variety for summer conditions. It means that this variety has more vigorous growth in leaves and plant than e.g. Lisboa and Lagos. It makes this variety suitable for an enlarged period of fruit harvesting during summer period. Due to these characteristics the variety is slightly later but total yield will be higher than average. The fruits are relatively smooth at harvest stage, with a dark color. Length of the fruits is between 23-25cm. Grows good in Mexico, Guatemala, Southern Europe and New Zealand.

Type Crop INT : Parthenocarpic

Varieties perform differently under different climatic conditions, and are usually only suitable for specific markets. For more elaborate information about this variety in a specific market, visit the assortments on our country websites, via www.bejo.com/countries.
